

Exam Code: ee0-011

Exam Name: atg certified relationship management
developer

Vendor: Exam Express

Version: DEMO

Part: A

1: An online application requires that the value of a user's security privilege be inherited from the privilege of its parent organization unless a value is specified on a per-user basis. Which repository feature provides the quickest and easiest implementation?

- A.RQL filter
- B.derived property
- C.custom property descriptor
- D.item-descriptor inheritance

Correct Answers: B

2: Which cache mode is most appropriate for repositories that are generally read-only, but updated infrequently?

- A.locked
- B.simple
- C.disabled
- D.distributed

Correct Answers: D

3: In which file is an application module's required classes specified?

- A.the META.INF file
- B.the module's .jar file
- C.the application.xml file
- D.the MANIFEST.MF file
- E.the J2EEContainer.properties file

Correct Answers: D

4: Which two statements are true if a repository item type T has a property P that has the cascade="update" attribute set? (Choose two.)

- A.Property P can be defined as either a repository item or a Collection of repository items.
- B.The cascade="update" attribute is applied recursively to any properties in the items referenced by property P.
- C.Anytime that a repository item of type T is updated, all corresponding items referenced by property P are updated.
- D.Anytime that a repository item of type T is added to the repository, the corresponding items referenced by property P are also added to the repository.

Correct Answers: A D

5: What are two advantages of using Item Descriptor Inheritance over independent item descriptors in a repository definition? (Choose two.)

- A.Duplicate data across different tables can be avoided.
- B.The number of database tables is reduced, simplifying queries.
- C.Item descriptors can inherit properties from multiple parent sources.
- D.Queries for items with common attributes can be created more easily.

Correct Answers: A D

6: Click the Exhibit button.

File1.jsp is changed to replace the include directive with the dsp:include tag. Which two other changes should you make so that the behavior of the application remains the same? (Choose two.)

file1.jsp

```
<%@ taglib uri="/dsp" prefix="dsp" %>
<dsp:importbean bean="/a" />
<dsp:setvalue param="a" value="a" />
<%@ include file="file2.jspf" %>
```

file2.jspf

```
<dsp:valueof param="a" />
<dsp:valueof bean="a" />
```

- A.rename file2.jspf to file2.jsp
- B.add a taglib directive to file2
- C.add a dsp:importbean tag to file2
- D.add a dsp:param tag to file1.jsp within the body of the dsp:include tag

Correct Answers: B C

7: The type of a repository item property is defined using component-item-type only if the item's data-type is a collection and _____.

- A.its elements are Java primitive types
- B.a one-to-many mapping is being described
- C.its elements are references to components
- D.its elements are references to other repository items

Correct Answers: D

8: Why should you use serviceLocalParameter() instead of serviceParameter()?

- A.to loop parameters
- B.to limit the scope of parameters
- C.to provide region-specific services
- D.to service internationalized content

Correct Answers: B

9: Click the Exhibit button.

What is the output of this JSP?

```

<%
String a = "b";
String b = "a";
%>

<dsp:setvalue param="a" value="<%= b%>" />
<dsp:setvalue param="b" paramvalue="a" />
<dsp:getvalueof id="a" param="b">
  <dsp:valueof param="a" />
  <%= a %>
</dsp:getvalueof>

```

- A.a
- B.b
- C.a a
- D.a b
- E.b a
- F.b b

Correct Answers: C

10: The IsEmpty droplet renders the true open parameter when the value input parameter is _____.
(Choose three.)

- A.null
- B.an Integer and Integer.intValue() == 0
- C.an Object array and Object [].length == 0
- D.a String and String.equals("") returns true

Correct Answers: A C D

11: When using programmatic repository data access, each database operation is automatically wrapped in a transaction of which mode?

- A.Required
- B.Supports
- C.Mandatory
- D.RequiresNew

Correct Answers: A

12: What is the purpose of the Message Registry?

- A.map messages to components
- B.register messages with the ACC
- C.map JMSTypes to message bean classes
- D.allow components to send and receive messages

Correct Answers: C

13: For asynchronous messaging, the sending and the receiving of messages occurs in _____.

- A.the same thread
- B.separate queues

- C.concurrent requests
- D.separate transactions

Correct Answers: D

14: What is the purpose of the return value from a form handler handle method?

- A.It returns void, so it has no purpose.
- B.It indicates whether the form properties should be reset.
- C.It prioritizes the order in which handle events are processed.
- D.It indicates whether Dynamo should continue processing the page.

Correct Answers: D

15: Which two are uses of the Repository Query Language? (Choose two.)

- A.to pre-load repository caches
- B.to remove an item from a repository
- C.to perform repository queries in a JSP
- D.to retrieve a list of configured repositories

Correct Answers: A C
