**Exam Code:** 1T6-520

Exam Name: Application Performance Analysis and

Troubleshooting

Vendor: Network General Corp

Version: DEMO

## Part: A

1: When optimizing application efficiency, an improvement in efficiency from the current 90% to
an efficiency of 95% or more should result in:
A.Significantly increased response time
B.Significantly decreased response time
C.Significantly increased network utilization
D.None of the above
Correct Answers: D
2: We can calculate for a file transfer by dividing file size by link speed.
A.Bandwidth latency
B.Application efficiency
C.Congestion delay
D.Throughput
Correct Answers: A
3: To accurately calculate bandwidth latency we must know (Choose all that apply)
A.The fastest link speed in the path between client and server
B.The slowest link speed in the path between client and server
C.The link speed between the client and the firewall
D.The distance between the client and the server (based on .66 the speed of light)
E.All of the above
Correct Answers: B
4: Round-trip distance latency between Phoenix and Singapore (9,081 miles or 14,529 km) is
A.About 165 milliseconds
A.About 165 milliseconds B.About 270 milliseconds
A.About 165 milliseconds B.About 270 milliseconds C.About 500 milliseconds
A.About 165 milliseconds B.About 270 milliseconds
A.About 165 milliseconds B.About 270 milliseconds C.About 500 milliseconds D.About 1 second Correct Answers: A
A.About 165 milliseconds B.About 270 milliseconds C.About 500 milliseconds D.About 1 second Correct Answers: A  5: If the predictive analysis results in response time that is slightly more than what users are
A.About 165 milliseconds B.About 270 milliseconds C.About 500 milliseconds D.About 1 second Correct Answers: A  5: If the predictive analysis results in response time that is slightly more than what users are experiencing, what action should we take?
A.About 165 milliseconds B.About 270 milliseconds C.About 500 milliseconds D.About 1 second Correct Answers: A  5: If the predictive analysis results in response time that is slightly more than what users are experiencing, what action should we take? A.Review the parameters used in the predictive analysis, this should not happen
A.About 165 milliseconds B.About 270 milliseconds C.About 500 milliseconds D.About 1 second Correct Answers: A  5: If the predictive analysis results in response time that is slightly more than what users are experiencing, what action should we take? A.Review the parameters used in the predictive analysis, this should not happen B.Analyze the network, it can not be the application
A.About 165 milliseconds B.About 270 milliseconds C.About 500 milliseconds D.About 1 second Correct Answers: A  5: If the predictive analysis results in response time that is slightly more than what users are experiencing, what action should we take? A.Review the parameters used in the predictive analysis, this should not happen B.Analyze the network, it can not be the application C.Analyze the network then the application, it may be either one
A.About 165 milliseconds B.About 270 milliseconds C.About 500 milliseconds D.About 1 second Correct Answers: A  5: If the predictive analysis results in response time that is slightly more than what users are experiencing, what action should we take? A.Review the parameters used in the predictive analysis, this should not happen B.Analyze the network, it can not be the application
A.About 165 milliseconds B.About 270 milliseconds C.About 500 milliseconds D.About 1 second Correct Answers: A  5: If the predictive analysis results in response time that is slightly more than what users are experiencing, what action should we take? A.Review the parameters used in the predictive analysis, this should not happen B.Analyze the network, it can not be the application C.Analyze the network then the application, it may be either one D.Nothing, this is normal
A.About 165 milliseconds B.About 270 milliseconds C.About 500 milliseconds D.About 1 second Correct Answers: A  5: If the predictive analysis results in response time that is slightly more than what users are experiencing, what action should we take? A.Review the parameters used in the predictive analysis, this should not happen B.Analyze the network, it can not be the application C.Analyze the network then the application, it may be either one D.Nothing, this is normal Correct Answers: D

D.Reducing the amount of data transmitted across the network
E.Upgrading the interconnecting devices (routers and switches) between the client and the server
Correct Answers: A B
7: Output from the predictive analysis model should match data in the
A.Sniffer Statistics tab
B.Application Profile
C.Ping command
D.All of the above
Correct Answers: B
8: Predictive analysis describes the worst case performance of an application based on the design
and configuration of the network.
A.TRUE
B.FALSE
Correct Answers: B
9: 0.002.750.000, as a measure of time, can also be represented as
A.27 ?milliseconds
B.2.75 microseconds
C.2.75 milliseconds
D.2.75 nanoseconds
Correct Answers: C
Correct Answers. C
Correct Allswers. C
10: If we do not know the speed of all of the links between the client and the server, we can
10: If we do not know the speed of all of the links between the client and the server, we can
10: If we do not know the speed of all of the links between the client and the server, we can to calculate bandwidth delay.
10: If we do not know the speed of all of the links between the client and the server, we can to calculate bandwidth delay.  A.Use our network diagram
10: If we do not know the speed of all of the links between the client and the server, we can to calculate bandwidth delay.  A.Use our network diagram  B.Estimate based on the 3-way handshake
10: If we do not know the speed of all of the links between the client and the server, we can to calculate bandwidth delay.  A.Use our network diagram  B.Estimate based on the 3-way handshake  C.Use the speed of the link nearest the server
10: If we do not know the speed of all of the links between the client and the server, we can to calculate bandwidth delay.  A.Use our network diagram  B.Estimate based on the 3-way handshake  C.Use the speed of the link nearest the server  D.Use the Line Speed displayed in the Sniffer
10: If we do not know the speed of all of the links between the client and the server, we can to calculate bandwidth delay.  A.Use our network diagram  B.Estimate based on the 3-way handshake  C.Use the speed of the link nearest the server  D.Use the Line Speed displayed in the Sniffer
10: If we do not know the speed of all of the links between the client and the server, we can to calculate bandwidth delay.  A.Use our network diagram  B.Estimate based on the 3-way handshake  C.Use the speed of the link nearest the server  D.Use the Line Speed displayed in the Sniffer  Correct Answers: A
10: If we do not know the speed of all of the links between the client and the server, we can to calculate bandwidth delay.  A.Use our network diagram  B.Estimate based on the 3-way handshake  C.Use the speed of the link nearest the server  D.Use the Line Speed displayed in the Sniffer  Correct Answers: A  11: When conducting a predictive analysis, one of the input parameters to the model is the user
10: If we do not know the speed of all of the links between the client and the server, we can to calculate bandwidth delay.  A.Use our network diagram  B.Estimate based on the 3-way handshake  C.Use the speed of the link nearest the server  D.Use the Line Speed displayed in the Sniffer  Correct Answers: A  11: When conducting a predictive analysis, one of the input parameters to the model is the user task time in seconds. If you do not know this value you can estimate how long the task took
10: If we do not know the speed of all of the links between the client and the server, we can to calculate bandwidth delay.  A.Use our network diagram  B.Estimate based on the 3-way handshake  C.Use the speed of the link nearest the server  D.Use the Line Speed displayed in the Sniffer  Correct Answers: A  11: When conducting a predictive analysis, one of the input parameters to the model is the user task time in seconds. If you do not know this value you can estimate how long the task took (round up to whole seconds) to get a fairly accurate prediction for the task.
10: If we do not know the speed of all of the links between the client and the server, we can to calculate bandwidth delay.  A.Use our network diagram  B.Estimate based on the 3-way handshake  C.Use the speed of the link nearest the server  D.Use the Line Speed displayed in the Sniffer  Correct Answers: A  11: When conducting a predictive analysis, one of the input parameters to the model is the user task time in seconds. If you do not know this value you can estimate how long the task took (round up to whole seconds) to get a fairly accurate prediction for the task.  A.TRUE
10: If we do not know the speed of all of the links between the client and the server, we can to calculate bandwidth delay.  A.Use our network diagram  B.Estimate based on the 3-way handshake  C.Use the speed of the link nearest the server  D.Use the Line Speed displayed in the Sniffer  Correct Answers: A  11: When conducting a predictive analysis, one of the input parameters to the model is the user task time in seconds. If you do not know this value you can estimate how long the task took (round up to whole seconds) to get a fairly accurate prediction for the task.  A.TRUE  B.FALSE
10: If we do not know the speed of all of the links between the client and the server, we can to calculate bandwidth delay.  A.Use our network diagram  B.Estimate based on the 3-way handshake  C.Use the speed of the link nearest the server  D.Use the Line Speed displayed in the Sniffer  Correct Answers: A  11: When conducting a predictive analysis, one of the input parameters to the model is the user task time in seconds. If you do not know this value you can estimate how long the task took (round up to whole seconds) to get a fairly accurate prediction for the task.  A.TRUE  B.FALSE
10: If we do not know the speed of all of the links between the client and the server, we can to calculate bandwidth delay.  A.Use our network diagram  B.Estimate based on the 3-way handshake  C.Use the speed of the link nearest the server  D.Use the Line Speed displayed in the Sniffer  Correct Answers: A  11: When conducting a predictive analysis, one of the input parameters to the model is the user task time in seconds. If you do not know this value you can estimate how long the task took (round up to whole seconds) to get a fairly accurate prediction for the task.  A.TRUE  B.FALSE  Correct Answers: B
10: If we do not know the speed of all of the links between the client and the server, we can to calculate bandwidth delay.  A.Use our network diagram  B.Estimate based on the 3-way handshake  C.Use the speed of the link nearest the server  D.Use the Line Speed displayed in the Sniffer  Correct Answers: A  11: When conducting a predictive analysis, one of the input parameters to the model is the user task time in seconds. If you do not know this value you can estimate how long the task took (round up to whole seconds) to get a fairly accurate prediction for the task.  A.TRUE  B.FALSE  Correct Answers: B
10: If we do not know the speed of all of the links between the client and the server, we can to calculate bandwidth delay.  A.Use our network diagram  B.Estimate based on the 3-way handshake  C.Use the speed of the link nearest the server  D.Use the Line Speed displayed in the Sniffer  Correct Answers: A  11: When conducting a predictive analysis, one of the input parameters to the model is the user task time in seconds. If you do not know this value you can estimate how long the task took (round up to whole seconds) to get a fairly accurate prediction for the task.  A.TRUE  B.FALSE  Correct Answers: B  12: The Predictive Analysis Model requires to be documented as part of the application profile.

C.Increasing the bandwidth on the slowest link

C.Cumulative bytes and number of tasks
D.File size and total time

Correct Answers: A

13: The \_\_\_\_\_\_\_ type of application usually does not have any request/reply interactions after the initial session is established.

A.Interactive
B.Throughput-oriented
C.Transaction-oriented
D.Streaming

Correct Answers: D

14: The image below is a view of the Sniffer Expert Connection layer statistics.

Protocol FTP-data | Workstation | Workstation | Workstation | Network Name | [172.20.64.20] | [172.28.32.10] | Network Address | [172.20.64.20] | [172.28.32.10]

Protocol	FTP-data				
Station Function	Workstation	Workstation			
Network Name	[172.20.64.20]	[172.28.32.10]			
Network Address	[172.20.64.20]	[172.28.32.10]			
DLC Name	3Com 8BE89B	Cisco 6A38DC			
DLC Address	0001038BE89B	00E0B06A38DC			
Subnet	[172.20.0.0]	[172.28.0.0]			
Port	1219	20			
Frames transmitted	10,904	7,223			
Data bytes transmitted	15,101K	145K			
Zero windows	0	0			
Average Ack Time	<1ms	46ms			
Window Size Range	64240	812 - 33580			
Keep Alives	0	0			
Retransmissions	3@ 40ms	0			

From the statistics shown we can determine that \_\_\_\_\_.

A.The client was very busy

B.The server was very busy

C. Very little delay occurred in the transmission of the data

D.Retransmissions had a serious effect on the transmission of the data

**Correct Answers: B** 

15:	When	capturing	data	for	the	application	profile,	it is	best	to	capture	,	when
poss	sible.												

A.Just the traffic for this application

B.Only the traffic going to or from the server

C.Only the traffic going to or from the client

D.All of the traffic on the network segment

Correct Answers: D

16: This image shows one of the Sniffer Monitor applications.

The Sniffer application shown in the graphic can be very useful in analyzing \_\_\_\_\_

A.Response timeA.Response timeA.Response time

B.Application efficiencyB.Application efficiency

C.Name resolutionC.Name resolution

D.Traffic flow D.Traffic flow

**Correct Answers: D** 

17: Bandwidth latency can be calculated for an individual frame.

A.TRUE

**B.FALSE** 

**Correct Answers: A** 

18: To ensure that you have captured all of the task data, it is recommended that you use

A.The largest capture buffer possible

B.A restrictive filter

C.Frame slicing

D.The capture panel window

**Correct Answers: D** 

19: A bandwidth consumption graph can help us determine \_\_\_\_\_\_.

A.The total amount of data sent by the client

B.The total amount of data sent by the server

C.The total amount of bandwidth available to operate the application

D.The average amount of bandwidth available to operate the application

## **Correct Answers: C**

20: In a multi-tier application environment, the application server maintains the data store.

A.TRUE

**B.FALSE** 

Correct Answers: B
