Exam Code: 1Y0-264

Exam Name: Citrix Presentation Server 4.5: Support

Exam

Vendor: Citrix

Version: DEMO

Part: A

1: An administrator determined that the Trusted Server Configuration must be enabled in order to prevent connections to rogue servers running Presentation Server.
Which tool must the administrator use for this purpose?
A.SSL Relay Configuration
B.ICACLIENT.ADM template
C.Access Management Console
D.Citrix Connection Configuration
Correct Answers: B

2: An administrator needs to configure Session Reliability, Kerberos Authentication and Smart Card Authentication. What must the administrator use to configure these three rules?
A..INI files
B.Config.xml
C.Citrix policies
D.ICACLIENT.ADM
Correct Answers: D

3: Scenario: An administrator of a Presentation Server environment receives an error when attempting to log on. The administrator realizes that the port used by Session Reliability is not responding. The administrator should verify that the _____ Service is enabled. (Choose the correct option to complete the sentence.)
A.IMA
B.XML
C.XTE
D.SMA
Correct Answers: C

4: An administrator opens the Access Management Console and sees an alert named Server metric alert. What could cause this alert?
A.A server metric has not been configured.
B.A server metric has been configured incorrectly.
C.A configured server metric exceeded the warning for a specific period of time.
D.A configured server metric dropped below the error threshold for a specific period of time.
Correct Answers: C

5: Scenario: An administrator needs to configure the SNMP community and designate management consoles to prevent unauthorized access. The administrator decides to block incoming SNMP traffic from the Internet by using a firewall. Which pair of UDP ports should the administrator configure on the firewall to block incoming SNMP traffic?
A.80 and 8080
B.161 and 162
C.443 and 444

D.1494 and 2598

Correct Answers: B

6: Scenario: A senior administrator within a large organization is conducting training for junior administrators on how to publish applications and configure farm-level settings. As a precaution, the senior administrator wants to keep track of the changes made to published applications and farm-level settings by the junior administrators within a Presentation Server environment. What should the senior administrator use to track these changes?

A.Resource Manager

B.Configuration Logging

C.Administration Logging

D.Presentation Server Console

Correct Answers: B

7: Scenario: Users report that connections to the Presentation Server farm intermittently fail. The administrator finds that impacted users are not located in any particular location or accessing any specific application. Users who access the Presentation Server farm through Program Neighborhood are not affected, but those who access the Presentation Server farm through Web Interface are experiencing this issue approximately 25% of the time.

A likely cause of this problem is that the _____ Service on one of the four load balanced servers running Presentation Server has failed. (Choose the correct option to complete the sentence.)

A.IMA

B.ICA

C.XML

D.SMA

Correct Answers: C

8: A compliance officer needs to record all Presentation Server sessions for a particular employee. Which tool should the compliance officer use to monitor the employee?

A.SmartAuditor

B.Resource Manager

C.Configuration Logging

D.Health Monitoring and Recovery

Correct Answers: A

9: Scenario: An administrator configured specific alerts to be raised in the Access Management Console within a Presentation Server environment. However, the administrator notices that the alerts are not displayed after reviewing the Event log. Which Citrix service should the administrator verify is enabled?

A.IMA

B.XML

C.SMA

D.WMI

Correct Answers: C

10: Scenario: An administrator notices a slow down in overall performance of an environment running Presentation Server. The administrator suspects that .DLL conflicts are causing the poor performance and decides to enable a feature that rebases .DLLs on selected servers to improve performance. Which report will provide the administrator with information on the savings obtained by having the .DLLs rebased?
A.Environment Usage
B.Server Performance
C.Virtual Memory Optimization
D.CPU Utilization Management
Correct Answers: C

11: An administrator sees the Primary farm metric alert in the Access Management Console. Which step can the administrator take to resolve this alert?
A.Reassign the role of primary farm metric server to a different server in the farm.
B.Upgrade the version of Presentation Server on all data collectors within the farm.
C.Restart the server running Presentation Server that has been designated as the primary farm metric server.
D.Upgrade the version of Presentation Server on the primary farm metric server to the latest version that is available in the farm.
Correct Answers: D

12: Scenario: An administrator recently created new firewall rules between data centers and decides to check all traffic in a Presentation Server environment to ensure it is flowing correctly. However, the administrator is unable to open the Presentation Server Console. A likely cause of this issue is that TCP port _____ has been closed. (Choose the correct option to complete the sentence.)
A.443
B.1494
C.2512
D.2513
Correct Answers: D

13: When configuring a Microsoft SQL replicated environment in an existing farm, which command does an administrator need to run?
A.DSMAINT CONFIG
B.DSMAINT MIGRATE
C.DSMAINT FAILOVER
D.DSMAINT PUBLISHSQLDS
Correct Answers: D

14: Scenario: An administrator wants to develop a custom test not included in Health Monitoring and Recovery. The administrator is able to develop the custom test using the Health Monitoring

and Recovery SDK package, but needs to verify that it works before running it on the server farm. Which executable should the administrator run to verify that the custom test works properly?

A.HMRSDKTester

B.HMRSDKCheck

C.HMRSDKMytest

D.HMRSDKCustom

Correct Answers: A

15: An administrator configures all user profiles so that printers are auto-created and opens all ports required by the Presentation Server farm. Which two TCP ports are used for printing by Windows-based devices using the Presentation Server 10.1 client? (Choose two.)

A.1494

B.2512

C.2598

D.9100

Correct Answers: A C

16: When restoring a Microsoft SQL data store to a different database the administrator should select _____ on the Options page. (Choose the correct option to complete the sentence.)

A.Overwrite the existing database

B.Preserve the replication settings

C.Restrict access to the old database

D.Prompt before restoring each backup

Correct Answers: A

17: Scenario: An administrator published several applications in an environment running Presentation Server and now wants to ensure that the organization is in compliance with licensing agreements for the applications. Which report should the administrator run to gather this information?

A.Session Statistics

B.Application Usage

C.Licensing Statistics

D.Environment Usage

Correct Answers: B

18: Scenario: An administrator is restoring a backup of a Microsoft SQL data store to a new database server. The administrator created a new DSN file that points to the restored database. What does the administrator need to do next to complete the restoration?

A.Run DSCHECK to validate the data store.

B.Configure the IMA Service to use the new DSN.

C.Configure the XTE Service to use the new DSN.

D.Run CHFARM to join the server to the new farm.

Correct Answers: B

19: A user has just logged onto Web Interface successfully, but does not see any of the streamed applications displayed on the screen. What is causing this issue?

A.The XML Service is not properly configured.

B.Web Interface is configured for remote applications only.

C.The user is running an old version of Program Neighborhood Agent.

D.Web Interface is configured for streaming applications with fallback to remote applications.

Correct Answers: B

20: Scenario: An administrator configured two applications within one profile to be streamed to users. When remote users logged in, they reported that it took an excessive amount of time for the applications to become available. How can the administrator decrease the time required to stream the applications?

A.Create two profiles, one with each application.

B.Configure dual streaming within Web Interface.

C.Recreate the profile using a more powerful system.

D.Store the profile on a network share logically in close proximity to the remote users.

Correct Answers: D
