Exam Code: 0B0-102

Exam Name: BEA8.1 Certified Developer:Portal Solutions

Vendor: BEA Systems

Version: DEMO

Part: A

1: What are three ways to enable error pages within Portal applications? (Choose three.)

A.Associate a JSP page with an error page, through a JSP directive

B.Associate HTTP error codes with error pages, in the deployment descriptor

C.Associate Java exception classes with error pages, in the deployment descriptor

D.Associate a JSP page with an error page, through a JavaDocs documentation comment

Correct Answers: A B C

2: You created a page flow in which the flow enters an action method, then is forwarded to a JSP. What are two ways to bind information into this flow, so that the JSP can access the data using XScript? (Choose two.)

A.The action method adds information to the request object.

B.The JSP method reads a value from a pageContext variable.

C.The JSP contains a form for which the action is bound to an action Form Bean.

D.The action method calls a private method in the page flow class; the method initializes a public member variable.

E.The action method increments a private member variable for which two private accessor methods are provided.

Correct Answers: A D

3: A developer imports an existing database control (a .jcx file) by right clicking a folder in the Application window and selecting Import. The developer drags the database control from the Application window onto the Flow View canvas of a page flow. What happens?

A.A new page is created on the canvas.

B.A new action is created on the canvas.

C.A new control displays in the Data Palette.

D.A wizard   prompts the developer for the SQL command to be used by the control.

E.A wizard prompts the developer for the name of the datasource used by the control.

Correct Answers: C

4: Which statement is true about applying entitlements to a desktop portlet?

A.Entitlements cannot be applied to a portlet.

B.The administrator can set only the View check box.

C.Only portlet titlebar options that are enabled by the developer can be set.

D.The administrator can set only the View, Edit, Remove, Maximize and Minimize check boxes.

Correct Answers: D

5: Click the Exhibit button. How does WebLogic Portal find the SMTP host for outgoing mail?

A.It is set as a request parameter in thankYou.jsp .

B.It is set as a session parameter in thankYou.jsp .

C.It is configured using the SMTP Manager in the WebLogic Console.

D.It is configured using the Mail Service in the Portal Administration tools.

Correct Answers: D

6: On which component can you change the layout type?

A.Book

B.Page

C.Portlet

D.Desktop

E.Application

Correct Answers: B

7: What are two purposes of creating a desktop? (Choose two.)

A.to provide a deployable enterprise application

B.to provide a specific access point for entitled users

C.to provide a Web application development package

D.to provide a visual development area for Workshop composition

E.to provide an administrative mechanism for controlling resources

Correct Answers: B E

8: When using the WebLogic Administration Console, which of the following actions would result in a deployed and activated Portal application? (Choose two.)

A.Uploading the .ear file through the WebLogic Administration Console

B.Turning on auto-deployment and copying your .ear file to the administration server's stage folder

C.Using the location directory navigator select your .ear file, followed by targeting and naming the application.

D.Using the location directory navigator, select the portal application root folder, followed by targeting and naming the application.

Correct Answers: C D

9: When developing custom skins, which action prevents the loss of changes during product upgrades?

A.Add new entries anywhere in the skin.properties file.

B.Add new entries at the end of the skin.properties file.

C.Create a skin_custom.properties file in the same directory as the skin.properties file.

D.Create a new skin_custom.properties file, under a new directory, for your skin.properties file.

Correct Answers: C

10: A JSP contains this line: <render:writeAttribute name="id" value="<%= button.getPresentationId() %>"/> Which statement is true about render ?

A.render is a prefix.

B.render is the name of a TLD file.

C.render is the name of a tag handler.

D.render is an alias, set previously in a page import directive.

E.render is a Java object, defined previously in a declaration or scriptlet.

Correct Answers: A

11: Click the Task button. Match each task with the Behavior Tracking component that performs it.

Correct Answers:

Match each task with the Behavior Tracking component that performs the task.

Tasks

Event Service	Sends an event object to all interested parties
Event Listener	Publicizes a list of event types it wants to receive
Event Trigger	Creates and dispatches an event object

Behavior Tracking Component

Event Listener	Event Service	Event Trigger

12: When using the <um:getProperty> tag in a JSP, to avoid retrieving the specified property value from the Anonymous User Profile, what must be done?

A.Ensure that the visitor is authenticated.

B.Ensure that the visitor is authorized to access the JSP.

C.Use the <um:getProfile> tag before using the <um:getProperty> tag.

D.Ensure that the visitor has a value set for that property, so that no default value is used.

Correct Answers: C

13: Consider the following JSP code section: <utility:uriContent id="data" uri="<%=uri%>"><%=data%> </utility:uriContent> A portlet is created from the JSP and added to a page placeholder.   Assume that the URI is a valid address and it is accessible. Wiith respect to the resulting display of this page, which statement is true?

A.The data variable is the wrong type.

B.The data stream causes a JSP runtime error.

C.The data is surfaced without any problem.

D.Any embedded links in the data will have no side effects.

Correct Answers: A

14: When creating a Database control, how does the developer ensure that database connection pooling will be used?

A.When creating the control, the developer is prompted to choose a connection pool.

B.Connection pooling must be enabled for each control individually through the Portal Administration console.

C.The developer must specify that a connection pool (rather than a dataSource) is used, when the control is created in Workshop.

D.When creating the control, the developer must select a dataSource that is already associated with a connection pool.

E.The developer must click on the Database control and select a connection pool from a pull-down menu in the Property Editor.

Correct Answers: D

15: Which three are valid entries for the "empty content search" part of a content selector when comparing with document type properties? (Choose three.)
A.Events
B.Behavior
C.A Literal value
D.An HTTP request property
E.A User Profile Property Set value
Correct Answers: C D E
